Bundesministerium
für Bildung
und Forschung

Distinguished Speakers

Keynote: Prof. Dr. med. Jan. D. Schmitto

Perspective Telemedicine – Patients, Clinicians, Researchers

Measure Your Commitment to a Healthier Lifestyle

Dr. Anil Sinaci, SRDC

Automating Activity Recognition with Sensors

Prof. Abdelghani Chibani, UPEC, LiSSI Lab

Making Health Data, Privacy, Anonimisation Work Together for Research

Lora Kushner, Norima Consulting Inc

Chatbots in Tele-Medical Care

Dr. Wolfgang Thronicke,
Atos Information Technology GmbH

Medical Protocol Management for Telemedicine Practice

Elsemie ten Pas, Sopheon

Applying Machine Learning for Remote Image-Based Infection Recognition

Dr. Rolf Neubert, Target Holding

Let's talk about

- Integrating heterogeneous data
- Protecting patient privacy
- Predicting using trend analysis
- Decision support for patients & HCPs

"Every second the doctor is not seeing patients is wasted time. Doctors already spend roughly 40 percent of their day documenting and doing other administrative tasks. To waste the other 50 to 60 percent of your day traveling between patients is a 50 to 60 percent reduction in efficiency. Short of teleportation, the doctor house call will always be an irresponsibly massive reduction in primary care efficiency."
- Dr. Jay Parkinson, Founder and Chief Medical Officer, Sherpaa
